

A truly open-source MongoDB alternative built on PostgreSQL.

Marcin Gwozdz
Director of Strategic Alliances, FerretDB Inc.
Postgres Conference, 2024

AGENDA

- Introduction
- Why we are doing this?
- What is FerretDB?
- Examples of use
- Conclusion
 - Document Database Community

ABOUT ME

- Marcin Gwozdz
- 9+ years of experience in vendor relationships, mainly OSS
- ex-Percona, ex-Exclusive Networks
- Open Source Enthusiast

Marcin Gwózdź

Director of Strategic Alliances at FerretDB //
Partner Development Manager // Relationship...

Working with data should be as easy as possible!

What does it mean?

- Database of your choice
 - Reliability
 - Flexibility
 - Intuitive interface
- No vendor lock-in
- No legal constraints
- Supportive vendor/community
- ...

MongoDB's popularity

“Which database environments have you done extensive development work in over the past year, and which do you want to work in over the next year?” 65k responses

[Source: StackExchange Developer Survey, 2022](#) (excerpt)

“Which database environments have you done extensive development work in over the past year, and which do you want to work in over the next year?”

NoSQL nr 1: MongoDB

MongoDB advantages:

- Document-oriented use cases
- Flexible schema
- Query language
- Aggregation framework
- Drivers
- Developers experience overall

MongoDB: it's great! But... SSPL?

SSPL

MongoDB - since 2018, released under the Server Side Public Licence (SSPL).

If MongoDB is used as part of a Cloud Service...

... everything you use to provide that service needs to be open - sourced. Or you pay a licence fee.

SSPL kills innovation and creates vendor lock-in.

More info:

www.ssplisbad.com

Also: Peter Zaitsev and Matt Yonkovit's articles on Percona Blog

We've talked to users - here's what they said

“The SSPL license is vague - we are looking to replace MongoDB due to the legal risks and uncertainty.” - a FAANG company

“We are looking to find a MongoDB Atlas alternative, without vendor lock-in.” - Major travel search portal

“Pricing of MongoDB Atlas is not suitable for our use case.” - Small SaaS business

“We are unable to offer our customers an open-source, MongoDB-compatible database.” - Cloud Infrastructure provider

Impact of SSPL on competition and availability

Let's look at the NoSQL databases available on the Civo Marketplace:

The image shows a grid of six database cards from the Civo Marketplace. Each card includes a logo, a name, a brief description, and a version number. A red arrow points to the MongoDB card, which is annotated with the text 'Outdated 2018 version, before SSPL'.

Database	Description	Version
Ferretdb	A truly Open Source MongoDB alternative.	1.9.0
Mariadb	MariaDB is a community-developed fork of MySQL intended to remain free under the GNU GPL.	10.4.7
Mongodb	MongoDB document databases provide high availability and easy scalability.	4.2.12
Percona MySQL	Percona Operator for MySQL based on Percona XtraDB Cluster.	1.11.0
Postgresql	The PostgreSQL object-relational database system provides reliability and data integrity.	11.5
Redis	Redis is an open source (BSD licensed), in-memory data structure store, used as a database, cache and message broker.	3.2

MongoDB compatibility on top of Postgres, SQLite...

FerretDB

- A MongoDB compatibility layer
- Written in Go
- Set out to become the de facto MongoDB Alternative
- Usable on-prem or in the cloud
- Can utilize various DBMS as backend
- Released under Apache 2.0

open source
initiative®

FerretDB

FerretDB vs. MongoDB architecture and licensing

MongoDB Drivers

- Main reason behind high adoption of MongoDB
- Provides unmatched Developer Experience
- Free to use under Apache 2.0

MongoDB Backend

- Licensed under SSPL
- Proprietary vendors (Amazon, IBM, Oracle, etc.) replaced it in their own implementations of a compatible product

FerretDB replaces the MongoDB Backend with another database backend, mainly PostgreSQL.

MongoDB compatibility means that all of the existing elements of the MongoDB Ecosystem (tools, frameworks and applications) are possible to use with FerretDB.

```
composetest — mongosh mongodb://127.0.0.1:27017?directConnection=true&serverSelection...
Current Mongosh Log ID: 6419b780db253be44e1ab1eb
Connecting to:   mongodb://127.0.0.1:27017?directConnection=true&serverSelectionTimeoutMS=2
000&appName=mongosh+1.6.1
Using MongoDB:  6.0.42
Using Mongosh:  1.6.1
```

For mongosh info see: <https://docs.mongodb.com/mongodb-shell/>

The server generated these startup warnings when booting
2023-03-21T13:56:16.265Z: Powered by FerretDB v0.9.0 and PostgreSQL .
2023-03-21T13:56:16.265Z: Please star us on GitHub: <https://github.com/FerretDB/FerretDB>.
2023-03-21T13:56:16.265Z: The telemetry state is undecided; the first report will be sent
Read more about FerretDB telemetry and how to opt out at <https://beacon.ferretdb.io>.

Enable MongoDB's free cloud-based monitoring service, which will then receive and display metrics about your deployment (disk utilization, CPU, operation statistics, etc).

The monitoring data will be available on a MongoDB website with a unique URL accessible to you and anyone you share the URL with. MongoDB may use this information to make product improvements and to suggest MongoDB products and deployment options to you.

To enable free monitoring, run the following command: `db.enableFreeMonitoring()`
To permanently disable:

```
test>
```

The screenshot shows the Docker Desktop interface. On the left, there are navigation options: Containers, Images, Volumes, Dev Environments (BETA), and Extensions. The main area displays a list of containers under the heading 'Containers'. A toggle switch is set to 'Only show running containers'. The container list includes:

Name	Image	Status	Port(s)	Last started	Actions
ferretdb	-	Running (2/2)		2 hours ago	[Stop] [Refresh] [Delete]
postgres	postgres	Running	5432-5432	2 hours ago	[Stop] [Refresh] [Delete]
ferretdb	ghcr.io/ferretdb/ferretdb:late	Running	27017-27017	2 hours ago	[Stop] [Refresh] [Delete]

The screenshot shows the MongoDB Compass interface. A 'Connection info' dialog box is open, displaying the following details:

- Stats: 0 Dbs, 0 Collections
- Host: localhost:27017
- Cluster: Standalone
- Edition: MongoDB 6.0.42 Community

Backend

Why PostgreSQL?

- FOSS
- Huge, supportive community
- High number of PostgreSQL users run MongoDB
- Existing JSON compatibility
- Strong interest from users with extensive operational experience

Can run with many derivatives and flavors of PostgreSQL...

Not just Postgres...

FerretDB can add MongoDB compatibility to various backends:

Backend	FerretDB Version
PostgreSQL	newest releases
SQLite	newest releases
SAP HANA	experimental

It is possible for anyone to create a handler for FerretDB to support a database or database as a service.

MySQL?

“Which database environments have you done extensive development work in over the past year, and which do you want to work in over the next year?” 65k responses

[Source: StackExchange Developer Survey, 2022](#) (excerpt)

“Which database environments have you done extensive development work in over the past year, and which do you want to work in over the next year?”

Applications

Why not just use Postgres and JSON?

Ease of use and compatibility. Many JS frameworks, stacks (MERN, MEAN, MEVN...) and other tools include or depend on MongoDB compatibility to work.

The Meteor logo consists of the word "METEOR" in a bold, black, sans-serif font. The letter "O" is replaced by a stylized red and white graphic of a comet or meteor streak.The Next.js logo features the word "NEXT" in a black, sans-serif font, followed by ".js" in a smaller font. A thin black line is drawn diagonally across the "X" and ".js".The React logo includes the blue atom-like icon (three intersecting circles) and the word "React" in a blue, sans-serif font.The Express logo is the word "Express" in a thin, black, sans-serif font.The JS logo is a yellow square with the letters "JS" in black, bold, sans-serif font.The Node.js logo features the word "node" in a black, lowercase, sans-serif font. The letter "o" is a green 3D cube. Below "node" is a green hexagon with "JS" and a registered trademark symbol inside.The Illa logo is a purple square with the word "illa" in white, lowercase, sans-serif font.The FerretDB logo features a black circular icon with a white stylized animal head (resembling a ferret) and the text "FerretDB" in a bold, black, sans-serif font.

Enmeshed

Enmeshed is an open source project combining various assets into an overarching digitalization approach for users and organizations. Its overall goal is to introduce a secure but easy-to-use way to share and request data and digital signatures between contacts.

FerretDB compatibility for the enmeshed Connector

🕒 1 minute read

At enmeshed, we believe in the importance of open-source software and the freedom it gives developers.

MongoDB is licensed under the Server Side Public License (SSPL) and from the start of our project we knew that we needed to find an alternative database solution for the enmeshed Connector. After researching and testing several options, we found [FerretDB](#) to be a suitable truly open source replacement for MongoDB.

What is FerretDB?

[FerretDB](#) acts as a drop-in replacement for MongoDB. It does this by proxying the MongoDB wire protocol and translating it to SQL, using PostgreSQL as the database engine.

More information about FerretDBs architecture can be found [in their docs](#).

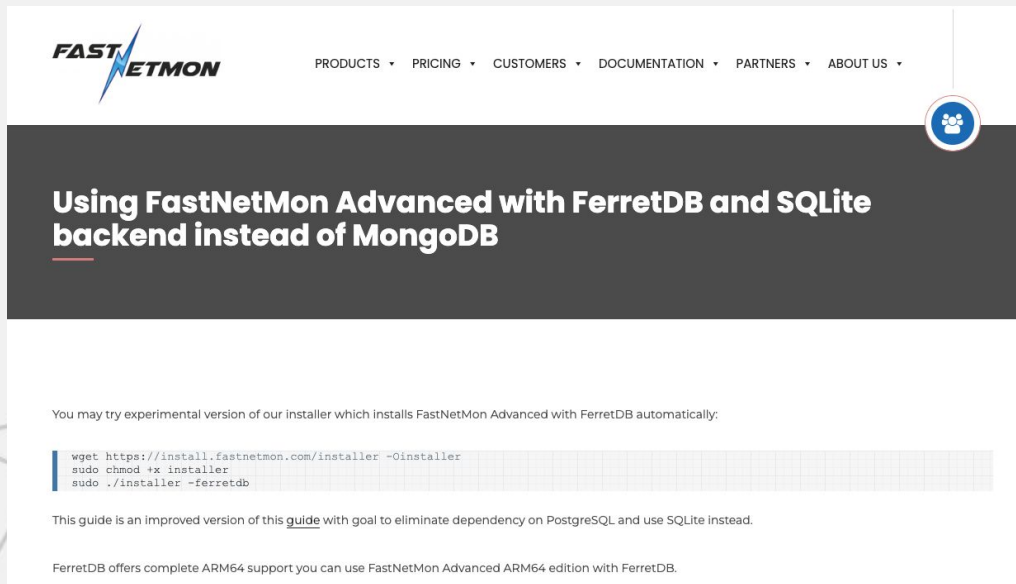

This means that the enmeshed Connector can now also be used with the PostgreSQL database, [as requested some time ago](#).

How did we make sure that FerretDB is compatible with the enmeshed Connector?

FastNetMon

FastNetMon is a team of professionals in cyber security. Our goal is delivering a versatile and reliable DDoS detection tool which can be used by companies of any scale in any country.

The screenshot shows the top of a web page with the FastNetMon logo on the left and a navigation menu with items: PRODUCTS, PRICING, CUSTOMERS, DOCUMENTATION, PARTNERS, and ABOUT US. Below the navigation is a dark header with the article title. The main content area contains a paragraph about an experimental installer, a code block with terminal commands, a note about an improved guide, and a mention of ARM64 support.

FASTNETMON PRODUCTS ▾ PRICING ▾ CUSTOMERS ▾ DOCUMENTATION ▾ PARTNERS ▾ ABOUT US ▾

Using FastNetMon Advanced with FerretDB and SQLite backend instead of MongoDB

You may try experimental version of our installer which installs FastNetMon Advanced with FerretDB automatically:

```
wget https://install.fastnetmon.com/installer -Oinstaller
sudo chmod +x installer
sudo ./installer -ferretdb
```

This guide is an improved version of this [guide](#) with goal to eliminate dependency on PostgreSQL and use SQLite instead.

FerretDB offers complete ARM64 support you can use FastNetMon Advanced ARM64 edition with FerretDB.

Alexander Fashakin
FerretDB Team

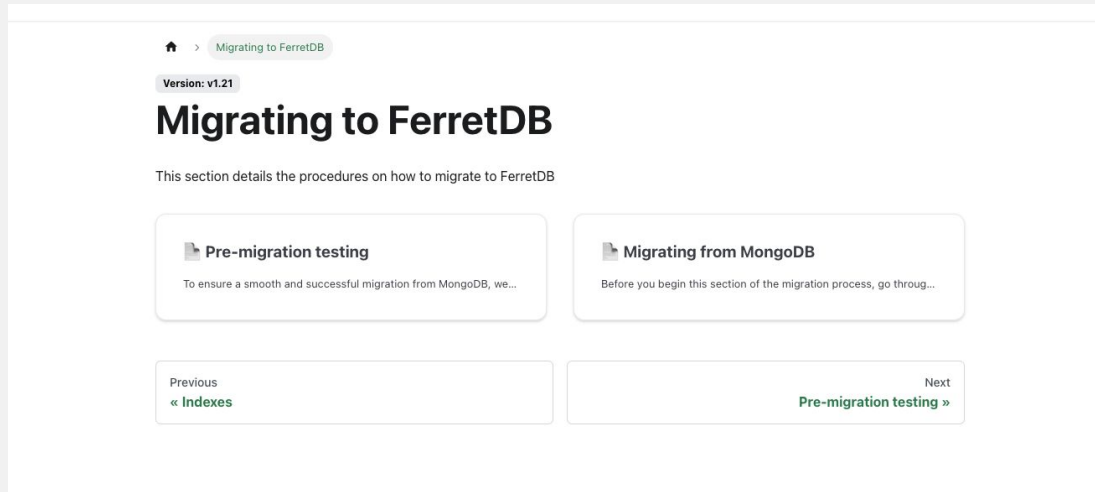

Setting up a scalable, reliable, and highly performant database application is essential for all production environments. But before then, you still need robust testing environments for your operations and teams.

Documentation

The screenshot shows a documentation page with a breadcrumb trail 'Home > Migrating to FerretDB' and a version tag 'Version: v1.21'. The main heading is 'Migrating to FerretDB'. Below it, a paragraph states: 'This section details the procedures on how to migrate to FerretDB'. There are two main content boxes: 'Pre-migration testing' with a sub-heading and a brief description, and 'Migrating from MongoDB' with a sub-heading and a brief description. At the bottom, there are navigation buttons: 'Previous < Indexes' and 'Next Pre-migration testing >'.

Conclusion

Current progress

- FerretDB 1.23 is production ready
- Good traction in the OSS community
 - Steady stream of outside contributors
 - 8900 stars, 380+ forks
 - Over 100 contributors
- Onboarding real world users
 - Network appliances
 - CMS
 - JS frameworks
 - Applications with light use of MongoDB
- FerretDB leads the way opening up the Document Database market
- We build FerretDB with the community

Where to find us?

- Available as Managed Service:
 - Aenix
 - Civo
 - Elestio
 - Tembo
- Self-Managed Offering:
 - AppCode - KubeDB
 - Elastisys
 - Leafcloud
 - Neon
 - Pigsty
 - Scaleway
 - Stackgres
 - Ubicloud
 - ...

Why to choose FerretDB?

- Database of your choice: **different possible backends**
 - Reliability: **backends supported by communities/proven vendors**
 - Flexibility: **choose the backend that is best for your workflow**
 - Intuitive interface: **MQL**
- No vendor lock-in: **fully open source project**
- No legal constraints: **Apache 2.0 license**
- Supportive community: **check our Community Slack channel!**
- ...

Document Database Community

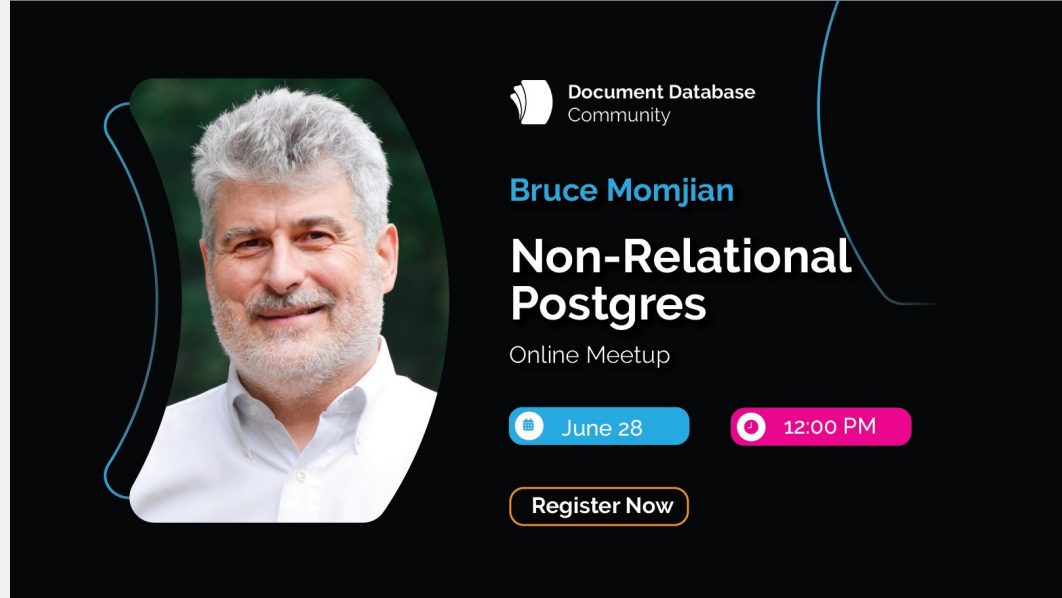

The Document Database Community

Founded by FerretDB,
open to all.

Monthly, soon bi-weekly talks.

Aim is to facilitate discussion
between vendors on industry trends,
standardizing
document databases.

www.documentdatabase.org

The image shows a promotional card for an event. On the left is a portrait of Bruce Momjian, a man with grey hair and a beard, wearing a white shirt. To the right of the portrait, the text reads: 'Document Database Community' with a logo, 'Bruce Momjian' in blue, 'Non-Relational Postgres' in large white font, and 'Online Meetup' in smaller white font. Below this, there are two buttons: a blue one with a calendar icon and the text 'June 28', and a pink one with a clock icon and the text '12:00 PM'. At the bottom right is a yellow button with the text 'Register Now'.
